## Database Conversion

With our Database Conversion service, we can merge the x-rays, scans, photos, and templates from your previous dental imaging software into the Aptyx Imaging database. This will allow you to manage all of your images in one database, rather than switching back and forth between different software. The conversion will also maintain image quality, patient demographic data, tooth numbers, taken dates, etc. We will work personally with your office to guarantee that the conversion results meet your expectations.

Common database conversions include:

- Carestream / KDI / Orthodontic Imaging
- Curve Dental (Curve Hero)
- DentalEye
- Dentrax Image
- Dexis
- Eaglesoft / Patterson Imaging
- Mediadent
- MOGO
- PatientGallery
- Planmeca Dimaxis / Romexis
- Prolmage
- Schick CDR DICOM
- Sidexis
- Tigerview
- Visix
- VixWin (see supported bridged modes below)
- XDR
