SOTA Cloud Database Conversions

SOTA Cloud currently offers full database conversions for the following imaging software systems:

- DEXIS 9
- DEXIS 10
- DEXIS 11
- Kodak and Carestream
- Dentrix Image
- Schick CDR
- Apteryx XrayVision3 / ProfSuni
- Apteryx XrayVision4
- Apteryx XVWeb
- Patterson Eaglesoft / Patterson Imaging v. 15+
- TigerView 8
- VaTech/EZDent-i
- VixWIN

All database conversions convert all image data except for annotations (i.e. drawings on images). In cases where the imaging software does not use exam templates (i.e. DEXIS) the images are split per patient by date into exams. In 99%+ of cases template/image positions are maintained during conversion.

Coming soon:

EvaSoft

XDR -March 2024

With more being added continuously.
